

# BE NICE TO YOUR DEVICE

## Recycle Today. Power Tomorrow.

Hello!

**Did you know that the same battery that powers your phone can also power a clean-energy future?**

I recently learned how to help shape a safer, more sustainable world by recycling the lithium-ion batteries used in my electronic devices that I don't need anymore, and I thought you might be interested in joining me. It's easy and free!

**BE NICE TO YOUR DEVICE!  
RECYCLE TODAY. POWER TOMORROW.**

Lithium-ion batteries – the ones in your cellphone, laptop, headphones, smart watches, and other devices – can help society build a more sustainable future by powering electric bikes and cars, storing renewable energy, and creating smarter, more connected cities.

Unfortunately, unsafe disposal of these batteries creates environmental and safety risks. We can reduce these risks and help to power a cleaner tomorrow by safely recycling our lithium-ion batteries and devices!

**I'M READY TO BE NICE TO MY DEVICE!**

Safely recycling your lithium-ion batteries and devices is easier than you think. Visit [BeNiceToYourDevice.org](http://BeNiceToYourDevice.org) and click on "Take Action" to find a store or other location near you that accepts these items for recycling.

**I WANT TO HELP OTHERS BE NICE TO THEIR DEVICE!**

Help spread the word by forwarding this email, or if you want to make an even greater impact, check out the resources to promote battery recycling in your community at [BeNiceToYourDevice.org](http://BeNiceToYourDevice.org).

I hope you'll join me in recycling your rechargeable batteries for a safer, more sustainable world. And pass on the advice...Be Nice To Your Device!

**BE NICE TO YOUR DEVICE  
Recycle Today. Power Tomorrow.**
